About Ampleton®

Founded in May 2018, Ampleton® is a service-based company driven by a team of passionate and experienced technical professionals. We specialize in delivering comprehensive energy and infrastructure solutions, offering services as consultants, designers, and execution partners. Our work is tailored to meet the diverse needs of commercial, industrial, and institutional clients.

Our core services include Solar Energy Systems, Electrical Panel Design, Transformer Installation, HT Line Works, Industrial Electrical Design, and HVAC (Heating, Ventilation & Air Conditioning). We focus on creating efficient, reliable, and cost-effective systems that help businesses operate smoothly while managing power more effectively.

At Ampleton®, we are committed to addressing modern power and infrastructure challenges through technically sound, energy-efficient, and the sustainable solutions. Whether it's designing a high-voltage system, implementing advanced HVAC solutions, or integrating renewable energy, our approach combines innovation, precision, and long-term value.

We take pride in supporting India's transition to green and smart energy systems by delivering future-ready solutions that reduce operational costs, enhance performance, and lower environmental impact.

Client is our priority, Ampleton is committed towards providing high and consistent levels of service to its clients. It subscribes to the philosophy that our clients are the reason we exist. Our reputation is one of the most valuable assets and critical to our success. To safeguard our reputation and our brand, we hold ourselves to standards of ethical behavior that go well beyond the legal minimums.

Founder’s Vision

Generating quality power at a lower cost, conserving energy, and enabling efficient power transmission can solve many of the world’s energy challenges. Power quality is ultimately about power economics. Good power quality delivers direct savings through reduced energy consumption, lower electricity costs, and minimized reactive power penalties. It also creates indirect benefits by preventing equipment failures, reducing maintenance costs, avoiding production losses, and protecting critical data and operational continuity.

High-quality power improves overall efficiency by allowing electrical equipment and systems to operate at optimal performance levels with minimal energy wastage. This not only lowers electricity bills but also reduces overall energy consumption and environmental impact. At Ampleton, we are committed to enhancing power quality and reducing carbon footprints through comprehensive industrial audits, EPC solutions, and facility optimization services that drive sustainable and cost-effective energy performance.

OUR PROJECT IMPLEMENTATION APPROACH

EV Charging Solutions

Ampleton is powering the future of electric mobility with intelligent EV charging solutions designed for residential, commercial, industrial, fleet, and public charging applications. Our comprehensive charging infrastructure combines advanced technology, smart energy management, and reliable performance to deliver safe, efficient, and scalable charging experiences. From everyday AC charging to high-performance DC fast charging, we provide future-ready solutions that support the growing adoption of electric vehicles while promoting sustainable transportation.

Fast Charging Stations

Fast charging stations are ideal for urban areas and moderate-traffic locations such as hotels, malls, and public spaces. With capacities ranging from 30kW to 180kW, they offer a balanced investment option with quicker setup and steady utilization. Typically suited for mid-range investors, these stations operate on a pay-per-use model and deliver consistent returns, with an average ROI horizon of around 4 years.

Super Charging Stations

Super charging stations are designed for high-demand environments like highways, logistics hubs, and fleet-heavy corridors. With higher capacities ranging from 240kW to 480kW, they support faster turnaround and large-scale EV usage, especially for commercial fleets. These stations require higher investment but offer strong revenue potential, backed by pay-per-use models and fleet guarantees, with an average ROI horizon of around 5 years.

AMPLETON 60

KEY FEATURES

Power Output: DC 60 kW (expandable up to 80 kW)

Charging Interface: CCS2 + CCS2

Output Voltage Range: 150–1000V DC (CCS2)

Connectivity: 4G, Wi-Fi, Ethernet

Protocol: OCPP 1.6J

IP Rating: IP55

IK Rating: IK10

AMPLETON 240

KEY FEATURES

Power Output: DC 240 kW

Charging Interface: CCS2 + CCS2

Output Voltage Range: 150–1000V DC (CCS2)

Connectivity: 4G, Wi-Fi, Ethernet

Protocol: OCPP 1.6J

IP Rating: IP55

IK Rating: IK10

AMPLETON 320

KEY FEATURES

Power Output: DC 320 kW

Charging Interface: CCS2 + CCS2

Output Voltage Range: 150–1000V DC (CCS2)

Connectivity: 4G, Wi-Fi, Ethernet

Protocol: OCPP 1.6J

IP Rating: IP55

IK Rating: IK10

Solar EPC & PMC

Ampleton delivers end-to-end Solar EPC solutions that help homes, businesses, and industries transition to clean, reliable, and cost-effective energy. Our expertise covers engineering, procurement, installation, and commissioning of solar power systems designed to maximize energy generation and long-term savings. From rooftop solar installations to large-scale solar plants, we provide customized solutions that meet diverse energy requirements.

With a strong focus on quality, safety, and performance, our team ensures seamless project execution at every stage. By combining advanced solar technologies with proven engineering practices, we help clients reduce electricity costs, lower carbon emissions, and achieve greater energy independence while contributing to a sustainable future.

1**Residential Solar EPC**

Smart rooftop solar solutions designed to reduce electricity costs and deliver long-term energy savings for homes.

2**Commercial Solar EPC**

High-performance solar systems engineered to lower operational costs and improve energy efficiency for businesses.

3**Industrial Solar EPC**

Large-scale solar installations built to support high energy demands with reliable and sustainable power generation.

HT/LT Solutions

Ampleton provides comprehensive High Tension (HT) and Low Tension (LT) electrical solutions designed to support industrial, commercial, institutional, and infrastructure projects. Our expertise spans electrical system design, installation, testing, commissioning, and maintenance, ensuring safe, reliable, and efficient power distribution. From HT substations and transformers to LT panels and distribution networks, we deliver solutions that meet the highest standards of performance and compliance.

With a team of experienced electrical engineers and technical specialists, we execute projects with a strong focus on quality, safety, and operational efficiency. Our HT and LT systems are engineered to provide stable power supply, minimize downtime, and optimize energy utilization, enabling businesses to maintain seamless operations while reducing long-term maintenance costs.

Ampleton develops robust electrical infrastructure tailored to the unique requirements of industrial facilities, commercial buildings, manufacturing plants, hospitals, educational institutions, and public utilities. Our capabilities include transformer installations, switchyards, control panels, cable laying, power distribution systems, and electrical upgrades that ensure reliable and uninterrupted power delivery.

From planning and engineering to execution and ongoing support, we provide end-to-end electrical solutions that enhance system reliability and operational performance.

Leveraging advanced technologies, industry best practices, and strict safety protocols, Ampleton helps organizations build future-ready electrical infrastructure capable of supporting growth, efficiency, and long-term sustainability.

Reliable HT & LT power distribution solutions designed for industrial, commercial, and institutional projects. Covering transformers, substations, switchgear, control panels, and cable networks, these systems ensure safe power delivery energy utilization, and long-term operational efficiency.
